

CAP COMPONENTS

PROFILE

Profile refers to the slope of the cap's crown. The crowns on low profile caps tend to be more sweeping towards the back, while crowns on high profile caps tend to be more perpendicular to the visor. The buckram, which is the liner inside the hat, helps maintain a cap's profile. In essence, a "low profile" cap has a shallow crown, while a "high profile" cap has a taller crown.

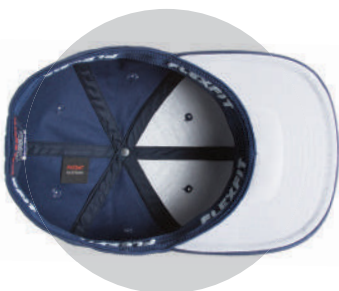

VISOR

The visor is the part of the hat that sticks out and shields your eyes from the sun. Visors differ in shape from curved to flat, offering a different look/shape for each hat depending on the visor shape.

CROWN

The crown is the height from the bottom edge of the hat to the top of the head or "crown". This distance helps determine how the hat will sit on top of the head. A larger number means the hat will sit low on the head.

PANELS

Each hat is comprised of panels attached by seams to form the overall shape of the hat. Hats can range from 5 to 6 panels, depending on the style of hat.
